Write your answers below or on another piece of paper.

Estimate the answer. Write a number model to show how you estimated.

1. There are 12 cans in each case. How many cans in 37 cases?

2. A large can of peaches holds 112 ounces. How many ounces are in 6 cans?

3. Ellen uses 1 gallon of lemonade to serve 22 people. How many people could she serve with 53 gallons of lemonade?

Use the statements below to help you solve the problems.

- The average person throws away about 5 pounds of trash per day.
- One ton is equal to 2,000 pounds.
- There are about 300 million people in the United States.

4. How much trash does the average person throw away in one week?

5. How much trash does the average person throw away in one year?

6. About how many tons is that?

7. About how many tons of trash does the average family of 4 throw away in one year?

8. Does the population of the United States produce more or less than 10 million tons of trash per year?

9. About how many tons of trash does the United States produce in one year?
